

AT77

GRAZING BARLEY

- Multi-graze barley
- Grow more over the cooler months
- Maximise yield and quality with the addition of Sultan annual ryegrass or Indulgence italian ryegrass
- Raxil Star treated or bare

FORAGE CEREALS

AT77 GRAZING BARLEY

BULK FEED FAST

AT77 germinates and establishes at lower temperatures than ryegrass, providing high quality feed earlier, throughout the cooler season. Trial work in canterbury has shown an increase in cool season feed of 3-4t/ha over annual ryegrass.

MORE OPPORTUNITY

AT77 has a very low growing point, increasing its grazing tolerance and re-growth potential compared to both triticale and oats. AT77 is also a great option in spring to get a green chop silage prior to sowing the next crop/pasture.

EASE OF MANAGEMENT

With its low growing point, AT77 will re-grow for you post grazing if grazed well. Ideal management is to graze AT77 at 3-4t/ha and target a post-graze residual of 1t/ha to maximise both total yield and quality. Back fencing is definitely recommended to encourage strong re-growth.

INCREASED FORAGE QUALITY

AT77 surpasses oats and ryecorn in terms of both quality and quantity, offering exceptional nutritional value. This attribute is particularly significant for enhancing stock condition during the cooler months or boosting animal performance in the spring.

MAXIMISING AT77'S POTENTIAL

- Treat AT77 similar to annual ryegrass, aiming for pre-grazing yields of 3-4t/ha and post grazing yields of approximately 1t/ha to optimise both quality and regrowth potential.
- Mixing AT77 with either Sultan annual ryegrass or Indulgence italian ryegrass will enhance both quality and quantity, particularly as we head into later winter/early spring.

LINCOLN YIELD TRIAL, 2020
